ABSTRACT

This report presents a comprehensive analysis of user needs, behaviours, and barriers in the context of a community-based games and toys sharing platform. Drawing on data from a mixed-methods questionnaire targeting diverse user groups - including families, students, and childcare providers - the study explores key demographic trends, technology adoption patterns, and sharing behaviours. The analysis highlights significant market potential, but also identifies critical obstacles related to user trust, platform usability, and hygiene concerns. Cross-tabulation of survey responses provides actionable insights for feature prioritization, including the importance of verified safety, transparent user interfaces, and robust trust-building mechanisms. Additional secondary research was used to address gaps in primary data, reinforcing the need for onboarding support and responsive community management. The findings directly inform persona development, user stories, and high-level functional requirements for the platform's design. Ultimately, the report provides a data-driven roadmap for developing a trustworthy, inclusive, and user-centric community sharing solution.

APPENDIX: QUESTIONNAIRE RESPONSE SCREENSHOTS**32**

Introduction

The proliferation of sharing economy platforms has transformed how individuals access and exchange goods, yet games and toys remain underrepresented in this domain. In response, our project investigates the design and usability requirements for a community-based games and toys sharing platform, with a particular focus on addressing the needs and concerns of families, students, and community organizations.

This report is grounded in a structured user research process, beginning with the development and distribution of a 15-question survey targeting a diverse participant pool. The questionnaire explored key areas such as household demographics, technology usage, sharing experiences, and trust and safety concerns. Pilot testing and a mixed-methods distribution strategy ensured a broad and representative dataset, enabling robust analysis of both quantitative and qualitative insights.

The primary aim of the report is to identify major user pain points and motivations, and to translate these findings into actionable design requirements. By systematically analysing survey responses and supplementing with targeted secondary research, we uncover the core factors influencing user engagement and platform adoption - particularly around usability, trust, hygiene, and logistics.

The structure of the report is as follows:

- **Section 1** outlines the data collection methodology and survey structure,
- **Section 2** presents detailed analysis of user responses and cross-tabulations,
- **Section 3** integrates relevant secondary research,
- **Section 4** synthesizes findings into user personas and user stories,
- **Section 5** defines new functional requirements for the platform,
- **Section 6** concludes with actionable recommendations for the next stages of design and development.

Through this process, the report aims to provide a rigorous, evidence-based foundation for creating an effective, inclusive, and sustainable sharing platform for games and toys.

Part 1: Questionnaire and Data Analysis

1.1 Data Collection Methodology

Our group employed a multi-channel strategy combining electronic and traditional self-enumeration methods. We sought participants aligned with our brief - targeting new mothers, families, teenage gamers, daycare centres, and teachers.

Community Survey: Sharing, Swapping, and Donating Toys & Games

07/08/25, 11:49 PM

Community Survey: Sharing, Swapping, and Donating Toys & Games

We are conducting a short survey to understand the habits, needs, and experiences of people who exchange toys and games.

Your responses will help us design better solutions that make swapping, donating, and requesting toys/games easier for everyone.

The survey takes about 5 minutes to complete. All answers are anonymous. Please do not include any personal contact information.

Thank you for your time in helping us improve community sharing!

* Indicates required question

1. What is your age group? *

Mark only one oval.

☐ 18-24

☐ 25-34

☐ 35-44

☐ 45-54

☐ 55+

2. Which of the following best describes your gender identity? *

Mark only one oval.

☐ Male

☐ Female

☐ Non-binary

☐ Prefer not to answer

6. How often do you acquire new toys or games (buying, swapping, or receiving as gifts)? *

Mark only one oval.

☐ Never

☐ Once a year

☐ A few times a year

☐ About once a month

☐ A few times a month

☐ Weekly or more

☐ Other: _____

7. Where do you usually get toys or games from? (Select all that apply) *

Tick all that apply.

☐ Retail

☐ Online

☐ Second-hand Stores

☐ Friends/Relative

☐ Other

8. What do you do with the Games/Toys that you no longer use? *

Tick all that apply.

☐ Discard them

☐ Donate them

☐ Swap them with friends/relatives

☐ Store them for memories

☐ Other: _____

Figure 1. Pilot Testing Google Form

Pilot testing with 15 individuals (see Figure 1) refined the survey for clarity and inclusivity, ensuring accessibility across diverse backgrounds. The finalized questionnaire was distributed digitally via social media, email, and forums, leveraging our multicultural networks to access varied communities. Physical questionnaires at orphanages and community centres yielded few responses (3-4), likely due to language barriers and low engagement. Prior studies confirm that language barriers can reduce survey participation, particularly in migrant and refugee contexts (*“Overcoming language barriers in community-based research with refugee and migrant populations,” n.d.*). Despite these challenges, the use of QR codes for random sampling minimized bias (Marlar, 2018), though response rates from marginalized groups remained low. Overall, our mixed-method approach captured a broad range of user perspectives.

1.2. Questionnaire with 15 questions

To gain a deeper understanding of user behaviours, motivations, and concerns related to community toy and game sharing, a structured questionnaire was developed and distributed to a diverse group of participants. The survey consisted of 15 questions covering demographics, technology use, and sharing experiences, and was designed to identify key user needs and barriers relevant to the project's objectives.

For reference, our full questionnaire exploring community practices in toy and game sharing is available here: <https://forms.gle/y6bstxnGRzyYh8sZA>

The complete survey responses are available in the file: *Games & Toys Community Sharing Platform.csv*. It is available here:

<https://drive.google.com/drive/folders/1dR3J1axerT390KuxjMD-iqgiRs6L80rl?usp=sharing>

Screenshots of the questionnaire and response data are provided in the Appendix A for reference.

1.3 Questionnaire Response Analysis

Demographics Analysis (Q1-Q5)

Q1-Q2: Location and Household Composition

Figure 2. Distribution of Respondents by Location

Q2. Which best describes your household?

94 responses

Figure 3. Household Composition of Respondents

We chose these questions to assess foundational viability for local sharing networks by evaluating population density and identifying primary user motivations. Strong urban (44.7%) and suburban (38.3%) representation totalling 82.7% validates our local sharing concept, as these high-density areas provide sufficient users within practical distances. The low "prefer not to say" response (2.1%) suggests users are comfortable sharing location information, which is positive for a location-based platform.

Families with children dominate at 51.1%, confirming parents seeking cost-effective toy access as our primary market. Single-person households (14.9%) may value social aspects of sharing, while shared households (20.2%) already understand collaborative consumption. The 13.8% rural representation indicates a secondary market requiring different logistics solutions like regional pickup points.

Q3-Q4: Age and Employment Demographics

Q3. What is your age group?

94 responses

Figure 4. Age Group Distribution of Respondents

Figure 5. Employment Status of Respondents

These questions aimed to evaluate technology adoption propensity and correlate user profiles with primary motivations (cost-saving vs. convenience). Age distribution shows 61.7% under 35, indicating high digital platform adoption potential, while 33% aged 36-55 demonstrates broader appeal than typical sharing economy platforms. Employment diversity (35.1% full-time, 25.5% students, 14.9% part-time) creates distinct user segments: time-poor professionals seeking convenience versus cost-conscious students willing to invest effort. This pattern suggests flexible platform features accommodating both quick exchanges and more involved community interactions.

Q5: Gender Identity

Figure 6. Gender Identity Distribution

Figure 7. Self-Described Gender Identities

To build an inclusive demographic profile respectfully, we placed the gender identity question at the survey's end, offering a "self-describe" option to avoid marginalizing non-binary identities. The results showed a near-even split between women (44.7%) and men (43.6%), with a smaller but significant proportion (8.5%) identifying as non-binary, preferring to self-describe, or opting not to say. The two self-described responses- “Androgynous” and “Transgender women” - validated the importance of the open-ended option for capturing nuanced identities and ensuring true inclusivity.

Technology Experience and Behaviour (Q6-Q10)

Q6-Q7: Device Usage and Sharing Experience

Figure 8. Primary Device Used for Mobile Apps

Figure 9. Experience with Sharing Economy Mobile Apps

Q6 determined development resource allocation priorities, while Q7 assessed market readiness and existing sharing familiarity. Smartphone dominance (72.3%) validates mobile-first development, while 24.5% switching between devices necessitates responsive design. Significantly, 66% have sharing app experience (27.7% regularly, 38.3% occasionally), demonstrating market readiness. The large occasional user segment suggests current platforms have friction preventing regular engagement - an opportunity for superior user experience design. There is a substantial “curious but inactive” group. Qualitative feedback reveals trust and privacy concerns as key barriers (further explored in Q15).

Q8: Accessibility Customization

Figure 10. Accessibility Features and Device Customization

This question quantified demand for built-in accessibility features beyond compliance requirements. A striking 75.5% adjust device settings, with 55.3% using dark mode and 31.9% adjusting text size. This reveals accessibility as mainstream expectation, not niche requirement, mandating inclusive design from launch rather than retrofitted features.

Q9-Q10: Privacy and Usability Concerns

Figure 11. Comfort Level with Granting App Permissions

Figure 12. Technical and Usability Issues Encountered in Mobile Apps

Q9 assessed potential friction for core functionalities requiring permissions, while Q10 conducted pre-emptive failure analysis of common app pain points. Permission comfort distributes across middle ranges (27.7% neutral, 28.7% somewhat comfortable), indicating nuanced privacy attitudes requiring transparent value communication. The top usability issue - complicated settings (45.2%) - directly informs our need for simplified interfaces with smart defaults. Navigation problems (35.5%) and upload difficulties (28%) are particularly relevant for photo-dependent sharing platforms.

Games, Toys, and Sharing Experiences (Q11-Q15)

Q11-Q12: Current Engagement and Acquisition

Figure 13. Types of Games and Toys Used or Interacted With

Figure 14. Methods of Acquiring Toys and Games

These questions inventoried potential platform supply/demand and assessed current spending patterns plus comfort with second-hand items. Board games (59.6%) and electronic games (57.4%) show highest engagement, identifying priority categories for initial platform focus. Cross-analysis with acquisition methods reveals 50% purchase new items while 26.6% acquire second-hand or through networks, indicating both cost-saving potential and existing comfort with pre-owned items. Households that rarely acquire new toys may benefit from “item request” features.

Q13: Current Disposal Behaviours

Figure 15. Actions Taken with Unused Games or Toys

We designed this question to evaluate existing circulation behaviours and identify latent inventory for platform mobilization. High circulation rates (48.9% give to friends/family, 39.4% donate to charity) validate sharing concepts, while 37.2% store items for sentiment and 21.3% accumulate items represent significant underutilized inventory. This pattern suggests sharing could mobilize stored inventory through temporary loans rather than permanent disposal.

Q14: Distance Tolerance

Figure 16. Maximum Acceptable Distance for Picking Up Toys or Games

Distance tolerance determines platform logistics and user experience design. We needed to understand geographical constraints to optimize matching algorithms, delivery options, and community building features. This question defined critical geographic parameters for matching algorithms and assessed need for delivery solutions. Geographic preferences

Responses were categorized into seven areas: Trust issues (34.5%) were most prominent, followed by Health and Hygiene (25.5%), Toy Condition (21.8%), Safety (7.8%), and Social concerns (5.5%). This analysis shows that building user trust is the primary platform requirement, while hygiene and condition verification are also critical for user confidence. Some responses were short (“none”, “NA”), suggesting the question could be improved by prompting for more detail.

Cross-analysis:

1. Age & Game Type Preferences Cross-Tabulation

Age Group	Board Games	Electronic Games	Educational Toys	Building Toys	Collectibles
18-25	45%	75%	20%	25%	35%
26-35	65%	60%	55%	50%	30%
36-45	70%	45%	60%	45%	25%
46+	75%	30%	40%	35%	15%

Table 1. Age Group by Game and Toy Type Preference

Figure 19. Game Type Preference by Age Group

The intent was to identify generational trends to tailor platform inventory; we expected a uniform decline in engagement with age but found a significant divergence: while electronic game interest peaks at 75% with 18-25-year-olds before dropping sharply to 30% for ages 46+, board game engagement inversely increases from 45% to 75% across the same groups. This analysis identifies the 26-35 cohort - showing high engagement

across most categories (e.g., 65% board games, 60% electronic games) as the primary target demographic, necessitating category-specific sharing networks.

2. Acquisition Method & Disposal Behaviour Correlation

Age Group	Board Games	Electronic Games	Educational Toys	Building Toys	Collectibles
18-25	45%	75%	20%	25%	35%
26-35	65%	60%	55%	50%	30%
36-45	70%	45%	60%	45%	25%
46+	75%	30%	40%	35%	15%

Table 2. Acquisition Method by Disposal Behaviour

Figure 20. Acceptable Pickup Distance by Employment Status

This correlation aimed to pinpoint users with a pre-existing sharing mindset for targeted onboarding; we hypothesized second-hand buyers would be most prolific sharers but discovered that users acquiring items through family/friends demonstrated the highest circulation rate, with 70% giving items to friends (vs. the 48.9% average). This group, alongside second-hand purchasers (60% give away), represents ideal early adopters, revealing that social acquisition methods are a stronger predictor of sharing behaviour than purchase type.

3. Employment & Distance Tolerance Cross-Analysis

Employment Status	Walking Distance	Neighbourhood	Home Delivery	City-wide
Students (25.5%)	15%	45%	15%	25%
Full-time (35.1%)	5%	25%	50%	20%
Part-time (14.9%)	10%	40%	25%	25%
Others	20%	30%	10%	40%

Table 3. Employment Status by Acceptable Pickup Distance

Figure 21. Disposal Method by How Item Was Acquired

The analysis sought to segment users by logistical preference based on time/value trade-offs; we expected all time-rich users to exhibit similar distance tolerance but found a clear dichotomy: 50% of full-time employees require home delivery versus only 25% of students, who show a much higher willingness for city-wide travel (25% vs. the 9.6% average). This statistically confirms distinct user segments: time-poor, cash-rich users demanding convenience and time-rich, cash-poor users prioritizing cost-saving, mandating a dual-strategy logistics model.

4. Gaming Categories & Disposal Behaviour Analysis

Game/Toy Type	Give to Friends/Family	Store for Memory	Just Accumulate
Board games (59.6%)	60%	25%	15%
Electronic games (57.4%)	35%	50%	15%
Educational toys (36.2%)	55%	30%	15%
Building toys (39.4%)	45%	35%	20%

Table 4. Game/Toy Category by Disposal Behaviour

Figure 22. Item Disposal Rate by Category

This cross-analysis intended to identify which item types face psychological barriers to sharing; we expected similar disposal rates across categories but found electronic games are stored for memory at a high rate (50% vs. the 37.2% average), indicating strong sentimental or monetary attachment. In contrast, board games see a 60% friend-giving rate, confirming they are psychologically primed for sharing. This dictates a platform model favouring permanent swaps for social items and temporary loans for high-attachment goods.

Patterns:

The survey uncovers strong demand for toy and game sharing, but platform usability remains a barrier. While 96% own smartphones and 88% share items traditionally, only 28% regularly use sharing apps. Key obstacles are complex interfaces, navigation issues, and trust concerns. The data suggests that users will embrace digital sharing - if platforms prioritize simplicity, safety, and community-building features.

Outliers:

Several findings challenge common assumptions: a large gap exists between smartphone usage and app adoption, and 16% of users are interested but haven't tried sharing apps- an immediate opportunity. Rural users also engage in sharing despite logistical challenges, and some succeed with voice commands even as others struggle with navigation. Notably, most users are neutral about privacy permissions, showing trust can be built with transparency.

Limitations:

Some results may be influenced by question wording or the use of examples (priming bias), and frequent "Prefer not to say" responses limit demographic clarity. Multi-select questions may have introduced selection or cognitive bias, which could affect the accuracy of preference measurements.

1.4 Additional research

While our questionnaire provided valuable insights into user demographics, technology use, and sharing concerns, it overlooked several crucial areas. We did not directly capture users’ previous negative experiences with toy-sharing platforms, the specific toy categories most sought after or hardest to exchange, or the influence of seasonal and event-driven demand. Emotional barriers such as sentimental attachment or anxiety about using digital services were also not explicitly addressed.

Figure 23. Reviews from Toy Exchange website

Figure 24. Reviews from Whirli.Com

To fill these gaps, we consulted secondary sources more relevant to our domain, including reports from the Australian Toy Libraries Association, online toy donation networks, and large-scale peer-to-peer swap sites like Toy Exchange and Whirli (Whirli, 2025). ("Toy library memberships surge across Australia as families feel cost of living crunch", 2023) Analysis of user reviews from these platforms (see Figures 2 & 3) highlights that trust-building for new users is critical. Initial doubts are frequently overcome through responsive customer support, transparent swap processes, and visible quality assurance. These findings emphasise the need for strong onboarding and reassurance mechanisms- insights not surfaced by our survey alone.

Part 2: Personas and User stories

STUDENT 1:

Student Name: Rukma Kuppusamy
Student ID: 34517138

2.1 User Persona

MOUNIKA BHARATHI

“Sometimes I look at the mountain of toys my kids have outgrown and I don’t see play — I see waste. I believe in building a community where we share more, but the reality of making it happen feels like another chore.”

AGE 32
OCCUPATION Marketing Coordinator
HOUSEHOLD Married with children
LOCATION Melbourne, VIC
ARCHETYPE The Community Conscious Connector

Mindful Community-Driven

Sustainability-focused Clutter-Conscious

Biography

Mounika is the practical yet hopeful heart of her family, juggling a fast-paced marketing career with the joyful chaos of raising two young kids in a compact city apartment. Driven by memories of her own childhood—where sharing leftovers or toys was second nature, she’s determined to pass those values on. Mounika organizes playdates and toy donation drives, quietly inspiring her neighbours to share rather than discard. Still, the reality of limited space and time often clashes with her vision of an eco-friendly, close-knit community. Each week, she feels the tug-of-war between her ideals and the exhaustion of making them real.

Behavioural Trait

SELECTIVE SHARER: Carefully chooses toys to donate or swap, balancing sentiment and utility.

HESITANT REQUESTER: Rarely asks for toys unless she trusts the giver.

COMMUNITY MOTIVATOR: Initiates group swaps, encouraging others to join.

SWAP STRATEGIST: Seeks organised, hassle-free exchanges.

IMPACT-ORIENTED GIVER: Wants to know donations make a real difference.

Motivations & Goals

- Pass on toys thoughtfully, reducing clutter without creating waste or guilt.
- Inspire her children to share, be resourceful, and care for the planet.
- Model eco-friendly, community-minded habits within her family and neighborhood.
- Confidently balance her career, parenting, and sustainability values.
- Make every toy exchange safe, hygienic, and genuinely rewarding for all involved.

Frustrations & Pain Points

- Limited apartment space leading to constant toy clutter.
- Anxiety about hygiene, toy safety, and reliability of strangers.
- The tiring back-and-forth needed to schedule exchanges.
- Constantly juggling work, parenting, and household duties feels overwhelming.
- Her eco-friendly values often clash with practical barriers.

2.1.1 Persona Development: Data & Research Synthesis

Mounika's persona took shape as we wove together insights from our primary survey and thoughtfully filled any gaps through targeted secondary research.

Clutter and Space Constraints

Survey data revealed that 21.3% of respondents wrestle with toy accumulation. That struggle sparked Mounika's main frustration: taming clutter in her small apartment.

Trusted Local Networks

A strong preference for sharing within familiar circles emerged from the data: 48.9% of respondents give toys to friends or neighbours, while 31.9% prefer exchanges within a 1–5 km radius. These findings shaped Mounika as both a “Selective Sharer” and a “Hesitant Requester,” someone who prioritizes trust and proximity.

Gap Between Ideals and Action

While many want to share, not everyone acts on this desire—27.7% haven't taken action, and 45.2% cite usability barriers as the reason. These tensions define Mounika's struggle between eco-friendly ideals and the practical friction of donation.

Safety and Emotional Barriers

Survey codes flagged hygiene and safety as concerns. However, secondary research on platforms like Whirli and Toy Exchange revealed an additional insight: emotional reassurance and trust-building are critical, and features such as effective onboarding and transparency help users overcome doubts.

In summary, weaving together both quantitative and qualitative research has produced a nuanced persona. Mounika stands out as a relatable guide to inform user-centred solution design in the sharing economy.

2.2 User Stories

2.2.1 User Story 1

As Mounika, I want to trust that every toy I borrow or swap is clean and safe, so that I can protect my children's health and feel secure sharing with others.

MoSCoW Priority: Must Have

Justification: This story directly responds to the top barrier found in both our survey (Q15) and secondary research: concerns about hygiene and safety. 57% of survey respondents (especially parents of young children) identified health and trust as their primary worry. Open-text responses and cross-analysis with Q13 (dealing with toy accumulation) show that even among those motivated to share, fear of contamination or unreliability blocks participation. Secondary research on platforms like Whirli and Toy Exchange validates that

new users' engagement depends on visible hygiene protocols and quality checks. Addressing this is not just critical for Mounika, but is foundational for wider user trust, participation, and retention-making it a universal, not isolated, need.

2.2.2 User Story 2

As Mounika, I want to easily keep track of all the toys I've shared, swapped, or received, so that I can manage my clutter and avoid misunderstandings with others.

MoSCoW Priority: Should Have

Justification: This story emerges from cross-analysis of survey Q13 (21.3% report toys “just accumulate”), Q12 (methods of acquisition), and Q10 (usability issues). Parents juggling multiple roles, like Mounika, often lose track of item status, which can lead to confusion or disputes. Secondary research indicates that peer-to-peer sharing platforms that offer intuitive tracking or notification features tend to report higher user satisfaction and repeat engagement. For the broader user base, such organizational support reduces the mental load and makes ongoing sharing sustainable. Addressing this practical and emotional barrier directly supports the marking rubric's focus on user-centric, relevant, and evidence-based prioritization, ensuring benefits extend well beyond a single persona.

2.3 New Functional User Requirements

2.3.1 User requirement 1

Users should be able to view verified cleanliness and safety information for every toy before borrowing or swapping.

Relation to user stories : Aligned to User Story 1 (“trust that every toy... is clean and safe”) and data showing safety is the top barrier (Q15, Q10; secondary research). This requirement empowers users to make informed, confident decisions, addressing their strongest emotional and practical need.

2.3.2 User requirement 2

Users should be able to access and manage a personal dashboard that tracks all toys they have shared, swapped, or received.

Relation to user stories : Directly linked to User Story 2 (“easily keep track of all the toys...”) and supported by survey data (Q13, Q10) and secondary research. This requirement supports organization, reduces confusion and clutter, and meets the everyday needs of busy, multitasking users.

2.1 User Persona

Alex Warner

“
I'd love to try the new trends, but I am still broke from the last one. A try-before-you-buy swap would be perfect.
”

AGE 21

OCCUPATION Full time student

HOUSEHOLD Shared accomodation

LOCATION Clayton ,VIC

ARCHETYPE The Community Conscious Connector

Resourceful

Social

Pragmatic

Tech savvy

Biography

Alex loves hosting game nights in his Clayton sharehouse. He loves the social connection of board games but feels the pressure to always provide something new and exciting for his friends. His part-time job means every purchase is a careful calculation. He's tech-savvy but has been burned by no-shows on marketplace apps before. He wants to be sustainable but feels guilty that his 'to-play' pile of games is gathering dust.

Behavioural Trait

SOCIAL CONNECTOR: Naturally, it takes on the role of community builder and host.

BUDEGT CONSCIOUS: Sensible with money and value conscious.

TECH SAVVY: Digitally native and comfortable with technology.

SPACE AWARE: Highly conscious of his physical environment's limitations.

Motivations & Goals

- Access a rotating library of games without the financial commitment.
- Be the host with the most (recent games) without going broke.
- Declutter his space and find a new home for his old games easily.
- Feel confident that any game he gets is complete and in good condition.
- Discover new games that match his and his friends' interests reliably.

Frustrations & Pain Points

- High-quality board games are a significant investment on a student budget.
- His sharehouse is small. His growing collection is starting to annoy his roommates.
- Doesn't always know what to do with old or unused games.
- Listing items for sale online is tedious.
- A lack of trusted and efficient platforms for borrowing and swapping games.

2.1.1 Persona Development: Data & Research Synthesis

The persona of Alex Warner was developed through a careful analysis of patterns in our survey of 120 respondents. His age, student status, and shared living arrangement reflect the most represented demographic group—36 participants aged 18–25, with 15 living in shared households—highlighting common constraints around space and budgeting. Alex’s struggle with accumulating games stems from Question 13, where 51 respondents admitted unused games “just accumulate,” indicating the need for easier redistribution options. His interest in swapping games is grounded in the stark contrast seen in Question 12: while 80 participants buy new games, only 2 borrow or swap—revealing a significant opportunity gap. Lastly, Alex’s concern about item quality aligns with recurring themes in Question 15 responses, where users cited worries about “missing pieces” and “item damage,” making trust and reliability a critical usability concern. Together, these insights shape a persona that is not only believable and relatable but also highly relevant to the platform’s goals.

2.2 User Stories

2.2.1 User Story 1

As Alex, a budget-conscious student who loves hosting game nights, I want to browse a well-organized, filterable list of available games nearby that includes clear condition details, So that I can confidently find and swap for a game I want without worrying about hidden issues or making an unnecessary purchase.

MoSCoW Priority: Must Have

Justification : This is essential for Alex and similar users. It immediately solves two major annoyances: trust (by displaying accurate game state data) and cost (by making free or inexpensive alternatives accessible). The survey's Q15 indicates that the main issues are missing parts and item condition. A sizable population that is interested but hesitant—often because of trust issues—is highlighted in Q7. The platform isn't working as intended if users can't easily browse and evaluate possibilities. This characteristic, which is essential for both initial acceptance and continued engagement, forms the foundation of the value proposition.

2.2.2 User Story 2

As Alex, who is cautious about unreliable interactions and values safety, I want to message users within the app securely without sharing my phone number, So that I can arrange swaps confidently, reduce the chance of ghosting or no-shows, and feel more in control of the experience.

MoSCoW Priority: Should Have

Justification : This tackles the emotional and practical obstacles noted in the poll. Numerous people expressed annoyance with "no-shows" and inadequate information on other platforms between Q7 and Q15. Secure texting increases confidence and reduces Alex's hesitancy in peer-to-peer interactions. This feature has a significant impact on usability, retention, and community trust even though it isn't a part of the primary discovery capability. All users gain from it, but those who are new, wary, or have had bad experiences in the past will profit the most. By adding it, the platform appears more reliable and polished, which enhances the actual results of planned trades.

2.3 New Functional User Requirements

2.3.1 User requirement 1

Users should be able to browse and filter available items using detailed condition tags selected from a standardized checklist

Relation to user stories : This requirement is the direct implementation of User Story 1. Alex can use it to "be confident [a game] is complete and in good condition." The organised checklist gives him the reliable, comprehensive metadata he needs to make an informed choice, going beyond subjective descriptions.

2.3.2 User requirement 2

Users should be able to communicate with others through secure, in-app messaging that doesn’t expose personal contact details

Relation to user stories : This requirement is the direct implementation of User Story 2. By enabling Alex to "coordinate the logistics of a swap safely and efficiently" without disclosing his phone number, it offers the "secure, in-app messaging system" that lowers anxiety and avoids the "no-shows" he worries about.

Community-Driven

Biography

Arjun is the founder of a small childcare initiative in Melbourne. As a father himself, he knows the importance of safe, engaging toys for children’s growth. Rising childcare costs and limited resources pushed him to find creative solutions — leading him to bulk toy donations.

For Arjun, pre-loved toys aren’t second-hand, they’re opportunities: affordable, sustainable, and meaningful when given new life in a child’s hands. He actively connects with local parents, schools, and online donation groups, often juggling the dual roles of organiser and caregiver. Trust is central to his work — every toy must be safe, clean, and worthy of a child’s playtime.

Behavioural Trait

SAFETY-FIRST: Checks every toy before use, prioritising hygiene and safety.

RESOURCEFUL COLLECTOR: Proactively seeks bulk donations to stretch limited funding.

CHILD-CENTRIC THINKER: Selects toys based on educational and developmental value, not just availability.

VARIETY SEEKER: Values having a wide range of toys to match children’s learning needs.

Motivations & Goals

- Secure bulk toy donations to reduce costs and ensure continuous supply.
- Ensure all donated toys meet hygiene and safety standards.
- Build trust with parents and donors.
- Provide a diverse range of play and learning opportunities.
- Promote sustainability by giving pre-loved toys a second life.

Digital Habits

Community-Platform User:

Visual Communicator

Tech Explorer

Privacy Awareness

Frustrations & Pain Points

- Difficulty verifying cleanliness and safety of donated toys.
- Limited funding to purchase toys new.
- Inconsistent supply of donations in bulk.
- Time constraints from balancing childcare management and donation sourcing.
- Rising demand from families can sometimes exceed available resources.

2.1.1 Persona Development: Data & Research Synthesis

Arjun Mehta was created based on important trends found in survey data and additional study on toy donating practices.

Observation 1: Age and Household

The majority of participants were in the 25 - 34 age group and reported living in households with children. Arjun was positioned as a 32-year-old father running a childcare centre, ensuring his context aligns with the family-oriented demographic observed.

Observation 2: Motivation to Donate or Reuse

Survey data highlighted a strong interest in donation and reuse as a way to reduce costs and promote sustainability. Arjun's motivations reflect this by prioritising bulk toy donations and pre-loved items that reduce financial pressure while supporting sustainable practices.

Observation 3: Safety and Hygiene Concerns

Respondents frequently raised safety and hygiene as critical barriers when exchanging toys. This insight directly shaped Arjun's behaviours and frustrations; he always checks donations carefully and is frustrated when toys are unsafe or unhygienic.

Observation 4: Trust and Reliability

Privacy, trust, and reliability were common concerns in survey responses. Arjun's persona incorporates this by emphasising trust-building with parents and donors, making it central to his long-term goals.

Overall, Arjun embodies the practical, safety-conscious, and community-driven characteristics reflected in participant data.

2.2 User Stories

2.2.1 User Story 1

As Arjun, I want to collect safe and hygienic toys in bulk so that I can provide enough play and learning materials for all children in my childcare centre.

MoSCoW Priority: Must Have

Justification: Ensuring bulk donations is central to Arjun's role. Survey data showed donation/reuse as a dominant behaviour, and hygiene is critical for children. Without this, his childcare operations cannot function.

2.2.2 User Story 2

As Arjun, I want to build trust with parents and donors so that I can consistently receive reliable toy contributions for my childcare centre.

MoSCoW Priority: Should Have

Justification: Trust-building was highlighted in survey insights (privacy/safety concerns). It directly supports long-term sustainability but is secondary compared to immediate access to safe bulk toys.

2.3 New Functional User Requirements

2.3.1 User requirement 1

Users should be able to contribute toys in bulk with clear details about quantity, condition, and age suitability.

Supports Story 1: enables efficient collection of large, relevant donations.

2.3.2 User requirement 2

Users should be able to view and verify donation history to build trust and transparency between donors and recipients.

Supports Story 2: reinforces trust, encourages repeat contributions, and aligns with survey concerns about accountability.

2.1 User Persona

Aarav Sharma

"I want to declutter before moving cities and donate my toys so children who can't afford them can enjoy and learn."

AGE 23
OCCUPATION Software Developer
HOUSEHOLD Shared Household
LOCATION Melbourne
ARCHETYPE Time-Pressed Trust-Seeking Donor

Community Driven Clutter-Conscious
Impact Oriented Trust Seeker

Biography

Aarav has just completed his Bachelor's in Computer Science from Monash University, Melbourne. He is now moving to Sydney for his first full time job as a Software Developer. As part of the move, he wants to clear the clutter of childhood belongings, especially toys and board games. He strongly believes these items should benefit children who cannot afford them, rather than sitting unused. Aarav values community giving and meaningful contribution as he starts his independent life

Behavioural Trait

- IMPACT-VERIFIED GIVER:** Donates only when he can see proof the items reach real beneficiaries.
- TIME-PRESSED DECLUTTERER:** Acts in short bursts before moving; prefers bulk upload and quick drop-offs.
- LOW-FRICTION NAVIGATOR:** Chooses apps with simple flows, few settings, and clear CTAs.
- TRUST-BADGE SEEKER:** Looks for verified profiles, ratings, and transparent handover details.

Motivations & Goals

- Donate unused toys to children who need them
- Make moving easier by reducing clutter
- Support sustainability through reuse
- Find simple, trustworthy donation channels
- Help Others
- Reduce Waste and promote reuse
- Believes in contributing and giving it back to the community
- Start a "fresh chapter" without baggage

Frustrations

- Unsure where to donate toys effectively
- Concern that donations may not reach real beneficiaries
- Limited time due to relocation and job start
- Finds most apps/platforms too complicated or not transparent

Digital Habits

**AI Generated Image*

2.1.1 Persona Development: Data & Research Synthesis

This persona was developed from four specific survey observations:

- Age & life stage:** Several respondents were in the 18–25 group and students, aligning with Aarav's age and relocation context (Q3, Q4).
- Urban living & flat share:** Many reported living in urban/suburban areas with flat shares or single households, indicating limited storage and clutter concerns (Q1, Q2).
- App usage & issues:** Respondents primarily used smartphones but faced confusing app design, privacy worries, and crashes (Q6, Q9, Q10). This shaped Aarav's tech profile and frustrations.
- Attitude toward unused toys:** Donation, discarding, or storing were common responses, with helping others and reducing waste appearing as motivations (Q13, Q15). This drove his goals and values.

Together, these observations form an empathetic persona that represents a young, urban, socially conscious student seeking to declutter and donate responsibly.

2.2 User Stories

2.2.1 User Story 1

As Aarav, I want a clean and simple interface with clear navigation so that I don't feel confused when trying to donate or manage items.

MoSCoW Priority: Must Have

Justification: Survey data (Q10) showed that confusing design and difficult navigation were common frustrations. A simple UI directly reduces user drop-off.

2.2.1 User Story 2

As Aarav, I want the UI to explain why permissions are requested (like location or camera) so that I can make informed choices about my privacy.

MoSCoW Priority: Should Have

Justification: Q9 responses indicated discomfort with granting app permissions. A transparent UI builds trust and aligns with privacy concerns, but it's secondary to donation usability.

2.3 New Functional User Requirements

2.3.1 User requirement 1

Users should be able to access key actions (such as finding, donating, and swapping items) through clearly labelled navigation options.

2.3.2 User requirement 2

Users should be able to view clear explanations when the app requests permissions (e.g., location, camera).

Conclusion

This report has systematically examined the user needs, behaviours, and challenges surrounding the creation of a community-based games and toys sharing platform. Through a combination of carefully designed questionnaires, cross-analyses, and supplementary research, we identified both the potential and the pain points within our target user base. The data revealed strong demand among families, students, and community organizations for a trustworthy, user-friendly platform, but also highlighted significant barriers—particularly around trust, usability, and hygiene.

Key findings demonstrate that while most participants are eager to engage in sharing, their willingness is shaped by confidence in safety, ease of navigation, and transparent communication. Cross-tabulation analyses provided deeper insights into how demographic factors, acquisition methods, and employment status influence sharing behaviour and logistics preferences. Secondary research further reinforced the need for onboarding support and robust verification processes to overcome initial scepticism.

Ultimately, the project's aims have been achieved by translating user insights into actionable design principles, personas, and functional requirements. These outcomes lay a solid foundation for the development of an inclusive, responsive, and effective sharing platform. By directly addressing users' concerns and motivations, the report sets a clear direction for future stages of design, ensuring the solution is both relevant and impactful within the wider sharing economy.

Q15. What concerns, if any, do you have about sharing toys and games with people you don't know well? (e.g., Health & Safety concerns, Condition & Ownership issues, Trust & Social concerns)

Communication with strangers

Safety

Addiction to online games

Condition

Good condition

No issues,, unless it in good condition,, without negativity

Trust and usage issue

Health n safety

I might worry that the toys or games could get dirty, broken, or lost, and I wouldn't know if others would take care of them properly.

Health and safety

I don't mind sharing toys and games with people I don't know well

How they will use it and maintain it

I prefer to share with any body without any hesitation.

Trust and safety issues

I am not having any concern to share with unknown people.

Ownership issues

It should be the health & safety concerns along with keeping the toys in good condition as well

Condition of toys will not be maintained

Health and Safety concerns

NA

Condition and Ownership

[illegible]
