

## Usability Design Project - Submission 2 Rubric

Rubrics provide guidelines for performance expectations. Actual grading may vary to reflect quality and quantity of submitted work, adherence to briefs and application of learning from unit content.

|                                                                    | <b>Below Expectations</b><br><i>Partly correct, major issues.</i>                                                                                                                  | <b>Satisfactory Attempt</b><br><i>Generally correct, several notable issues.</i>                                                                                                 | <b>Developing Skills</b><br><i>Mostly correct, some notable issues.</i>                                                                                                                   | <b>Strong Performance</b><br><i>Mostly correct, only minor issues.</i>                                                                                                                                  | <b>Exceptional Performance</b><br><i>Highly nuanced work, very minor issues.</i>                                                                                                                   |
|--------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Storyboards (30%)</b>                                           |                                                                                                                                                                                    |                                                                                                                                                                                  |                                                                                                                                                                                           |                                                                                                                                                                                                         |                                                                                                                                                                                                    |
| <b>Narrative, Empathy and Accessibility</b>                        | Storyboard narrative relates to user story, but with high focus on depicting app screens. Accessibility consideration depicted is not relevant to app user experience.             | Storyboard narrative depicts the user story, mostly focusing on actions. App user experience minimally featured. Relevant accessibility issue is superficially depicted.         | Storyboard narrative mostly depicts persona's user story with actions and emotion, some focus app screens. Relevant accessibility issue is present, relating to app use.                  | Storyboard narrative depicts specific persona well with user story consistently considering actions, thoughts and emotions. Accessibility meaningful impact on app use.                                 | Storyboard narrative presents specific persona with multiple types on empathy in all frames, low focus on app screens. Accessibility issue is explored realistically with empathy.                 |
| <b>Structure and Presentation</b>                                  | The storyboard is poorly structured. Very brief information or unclear drawing results in confusing events. May lack persona or user story for context.                            | The storyboard is structured well with some continuity of events. Persona name and user story are present. Drawings are mostly clear, some inconsistency with caption text.      | Storyboards includes persona name, user story and clearly drawn images that have matching text captions. Overall good continuity of events.                                               | Storyboards are drawn very clearly with persona name, user story and highly legible text. Some minor aspects of the structure lack clarity.                                                             | Storyboards are drawn very clearly with persona name, user story. Drawings and text are all highly legible. Story structure is highly coherent.                                                    |
| <b>Low-Fidelity Prototypes (40%)</b>                               |                                                                                                                                                                                    |                                                                                                                                                                                  |                                                                                                                                                                                           |                                                                                                                                                                                                         |                                                                                                                                                                                                    |
| <b>Kanban Board and Acceptance Criteria</b>                        | User stories and acceptance criteria not presented using a kanban. Criteria are not appropriate for usability acceptance criteria.                                                 | Kanban is used but with some organisation issues. Some criteria not relevant to user stories or not appropriate for usability criteria.                                          | Kanban contains acceptance criteria for each user story. Some have low relevance or are not appropriate for usability criteria.                                                           | Kanban has acceptance criteria for each user story, some are slightly vague or could have more careful consideration of realistic feasibility.                                                          | Each user story has complete and specific criteria, organised well in a kanban board. Relevant accessibility criteria present.                                                                     |
| <b>Prototype Implementation of Stories and Acceptance Criteria</b> | Prototype screens are provided but the screen elements have little focus or very unclear representation of defined acceptance criteria.                                            | Prototype screens address some of the user stories and criteria, but include some screens that depict low priority functions instead of directly addressing acceptance criteria. | Prototype screens primarily address the user stories and requirements, may be missing some acceptance criteria. Some screens have some unnecessary or unrelated elements.                 | Prototype screens are all relevant to user stories and include all acceptance criteria indicated as completed. Very few unnecessary or unrelated elements, but some criteria superficially represented. | Prototype screens are all relevant to user stories and include all acceptance criteria indicated as completed. Highly efficient use of screens to show well-considered implementation of criteria. |
| <b>Prototype Fidelity and Clarity of Prototype Sketches</b>        | Prototype has mostly appropriate fidelity, inconsistently drawn. Screen dimensions or element scale is inappropriate. Most element's types discernable, but purpose is unclear.    | Prototype has appropriate fidelity and overall consistency. Screen dimensions are appropriate but some elements inappropriately sized. Element types are easy to discern.        | Prototype has appropriate fidelity. Screens propositions and element scale are realistic. Important elements and content labels are present and understandable.                           | Prototype has appropriate fidelity, and realistic proportions in almost all areas. All screens are clearly drawn. Element types and purpose of important elements is very clear.                        | Prototype has appropriate fidelity and is highly considerate of mobile device size in all screens. All screens are clearly drawn. Element types and purpose easy to understand.                    |
| <b>Usability and Accessibility of Interface Designs</b>            | The design has unconventional features, resulting in violation of usability theory. General interface accessibility present for users without specific accessibility requirements. | Screens are mostly usable with some notable instances of usability or accessibility violations. A single accessibility-specific feature is depicted superficially.               | Screens are mostly usable with some notable instances of usability or accessibility violations. A single accessibility-specific feature is well-considered.                               | Screens have minor instances of usability or accessibility violations. The designs are generally accessible and multiple accessibility-specific features shown slightly superficially.                  | Screens have only few minor instances of usability violations. Designs are generally accessible and also have multiple accessibility-specific functionality depicted.                              |
| <b>Annotation of Usability Theory</b>                              | Limited annotations provided, some not of the correct type or there is duplication or principles between screens. Highlighting of some elements is unclear.                        | Annotations are present but missing some or not evenly distributed. Identification of elements sometimes vague. Naming of principles may be incorrect in some instances.         | Annotations are present for all screens. Specific elements identified, but some don't align with nominated theory. Identification of principles is mostly correct with only minor errors. | Annotations are present for all screens. Specific elements identified to match nominated theory. Some minor vagueness or misapplication of a principle.                                                 | Annotations present and evenly distributed between all screens. Specific elements are identified clearly and accurately match nominated theory.                                                    |
| <b>Report (30%)</b>                                                |                                                                                                                                                                                    |                                                                                                                                                                                  |                                                                                                                                                                                           |                                                                                                                                                                                                         |                                                                                                                                                                                                    |

|                                                |                                                                                                                                                                                                        |                                                                                                                                                                                                  |                                                                                                                                                                                               |                                                                                                                                                                                                              |                                                                                                                                                                                                                      |
|------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Application of Norman's Principles</b>      | 3 of Norman's principles are mentioned in the report but there is duplication or some are significantly incorrect. Application of principles in prototype is not clearly explained.                    | Three unique Norman's principles are mentioned in the report but some are explained incorrectly or describe generalised usability benefits only.                                                 | 3 of Norman's principles are mentioned in the report and appear to be applied correctly. Explanations have some superficial or vague assertion of correct implementation.                     | 3 of Norman's principles are described correctly. Explanation has some inaccuracy or generalisation of prototype implementation.                                                                             | 3 of Norman's principles are explained in the report with strong understanding of how the principles are applied in specific features of the prototype.                                                              |
| <b>Application of Accessibility Principles</b> | 3 accessibility principles have been discussed, but not explaining how exclusion was addressed, or only focuses on one type of accessibility. Some features or exclusions are incorrectly categorised. | 3 different accessibility principles correctly described mostly relevant to prototype. Relevant exclusions in at least 2 of 3 cases. Slightly vague in explaining how exclusions were addressed. | 3 accessibility principles applied correctly, relationship to prototype slightly unclear. Identification of exclusion is mostly clear but some described features have some unclear benefits. | Meaningful discussion of 3 accessibility principles. Exclusions are correctly described for each and directly addressed by prototype features. Some descriptions more related to general usability benefits. | Meaningful discussion of how 3 accessibility principles are applied. Specific exclusions are correctly described and directly addressed by implemented features. All features have realistic accessibility benefits. |
| <b>Conclusion</b>                              | A conclusion is present but has little meaningful information about actual work done in this submission.                                                                                               | The conclusion mostly has vague description of various aspects of the project having successful outcomes.                                                                                        | The conclusion mostly summarises work done in this submission with some vague identification of possible issues.                                                                              | The conclusion discusses limitations of low-fidelity prototyping that are specific to the submission but provides mostly generalised goals for high-fidelity prototyping.                                    | The conclusion discusses limitations of low-fidelity prototyping that are specific to the submission, and proposes some specific goals that require high-fidelity prototyping to implement.                          |
| <b>Written Quality and Visual Quality</b>      | Writing has frequent errors impacting clarity. Sequence of deliverables is confusing. Some visual formatting present, but lacking clearly defined headings and paragraphs.                             | Writing has some errors impacting clarity. Sequence of deliverables mostly correct. Heading are styled. Document design is plain with inconsistency between sections.                            | Writing has some errors, but ideas are clear, could be more direct and concise. Consistent heading styles. Professional visual design with some inconsistencies.                              | Professional writing free of notable error, could be more direct and concise. Highly consistent heading styles. Professional visual design with only minor formatting issues.                                | Highly professional writing, concise and free of error. Clear flow of ideas. Almost entirely consistent visual presentation, highly professional (title page template, graphical style, etc.).                       |
