

Usability - S2 2025

Submission 4 - Presentation (10%, Group Task)

Overview

As a group, prepare and deliver a presentation showcasing important updates implemented in your high-fidelity prototype to resolve the most important usability problems identified during the Submission 3 heuristic evaluations.

The presentation will highlight specific agreed solutions implemented by each group member demonstrating application of usability theory.

The presentation will be submitted as a recorded video at the end of Week 14. Each group will have a strict time limit to adhere to. Provide an overview of the presentation and discuss each group member's contributions. Presentation time should be equally divided between group members.

Consolidating Your Heuristic Evaluation Results

Before planning your presentation, compare and discuss the violations identified by all group members in Submission 3's heuristic evaluations. Determine which problems were the most common and severe. Select a number of agreed problems equal to the number of group members (e.g. a group with 4 members will have exactly 4 agreed problems).

As a group, discuss agreed solutions to the problems and implement the solutions in your high-fidelity prototype. If necessary, each group member may add 1 new screen to the prototype. Each group member will be responsible for discussing 1 problem and how it was fixed in the prototype.

Recorded Video Presentation

Plan your use of presentation time carefully. You will not have time to do a full walkthrough demonstration of all your prototype's features or describe unimportant screen elements.

- 3 group members = maximum 12 minutes
- 4 group members = maximum 15 minutes
- 5 group members = maximum 18 minutes

Ensure that your presentation includes:

- **Introduction and project overview (maximum 3 mins)**
 - Begin with a brief explanation or mission statement of your project concept to establish the context for the features shown in the presentation.
 - Overview of presentation content.
 - Intended target audience of your app.

- A brief summary of your most severe issues and agreed severity ratings.
- **Individual group member contributions (maximum 3 mins per group member)**
Each group member will present **1 problem** that was identified during the evaluation and explain how that problem was fixed, with reference to one additional theory. Include screenshots of relevant screens.

Include your name at the bottom of each screen's slide that you present.

- Briefly describe **1 problem** and the most relevant heuristic that it violates.
- Explain the agreed solution that was implemented.
 - Include annotated screenshots of the prototype screens, showing the original issue and implemented solution.
- Justify the solution using **1 additional principle/guideline** taught in the unit.
 - Additional theory must not be a Nielsen heuristic.
 - Each group member must use a unique theory/principle/guideline.
- Explain each solution's intended impact based on **1 ISO Usability component and relevant measure**.

Don't just describe what is visible in your screens. Marks are awarded for demonstrating correct application of usability theory.

Adhere to the required quantity numbers described above. If you exceed the specified numbers (e.g. explaining more than 1 guideline), only the first instance will be assessed.

Each group member must present a unique principle/guideline. There must be no duplications of theory/principle/guideline between group members.

Presentation Slide Deck

To utilise your presentation time effectively, your group must present using prepared slides. Do not open Figma during your presentation to do a live walkthrough demonstration of the prototype's screens.

Your slide deck's title page must include a link to your Google Slides (share to "Anyone at Monash with the Link" so staff can view the version history if needed).

Each group member's slides should:

- Include the group member's name at the bottom of the slide.
- Show a clear image of the screens being discussed.
- Include concise annotations for relevant features and theory being explained.
- Include key bullet points to support the spoken explanations.
- Be consistently and professionally formatted.

All non-original resources used in the presentation slides and demonstrated prototype screens must be referenced on a separate slide at the end of your slide deck.

Individual Performance in Group Presentations

All group members will be marked equally on the introduction content and slide deck format. Please collaborate with your group members to ensure that your group is well-prepared.

Presentation content and delivery of the remaining parts of the presentation (individual contributions) are individually assessed and may result in some variation between marks awarded to each group member.

Submission Requirements

Your upload should include a video (MP4 format) and presentation slides (PDF format).

To record a presentation video, we recommend using a Zoom meeting:

- Start a Zoom Meeting and turn on webcams, test microphones
- Open your presentation slides
- Start Zoom's screen sharing so that your slides are visible in the meeting
- Use Zoom's built-in recording feature to capture your video.
- If the video is larger than 500MB, you can compress it using [HandBrake](#).

The name of the presentation files should follow this structure:

FIT5152-Sub4-Applied#-GroupName (e.g. **FIT5152-Sub4-Applied1-TeamRocket**).

Submission Due: Friday 7th November, at 11:55pm.

Assessment Policies

Plagiarism and academic integrity

Plagiarism occurs when students fail to acknowledge that the ideas of others are being used. This includes when:

- Other people's work is used in whole or part without citation/reference.
- Other people's work is paraphrased or modified without acknowledgement.
- AI-generated output is presented as your own work without acknowledgement.

It is your responsibility to [maintain academic integrity in your work](#) and understand the [procedures and penalties](#) that apply to intentional and unintentional breaches of integrity.

Acceptable Image Licences

For image assets sourced online, we prefer images that have open licences that specifically allow commercial use without requiring payment. This includes images in the Public Domain

(no copyright), Creative Commons (copyrighted with permissive conditions for use) and other permissive licences that specifically allow commercial use without payment.

Websites may use different licences for different images. You are responsible for verifying that an appropriate licence is present. If attribution is required for an image, an acknowledgement in your references is acceptable.

Use of Generative AI Tools

In this assessment, you may only use generative AI to generate images to use as visual content in prototypes (e.g., user profile pictures, product photos, etc.). Any use of generative AI must be acknowledged by specifying the tools and prompts used (see [Learn HQ](#)).

- Clearly identify the part of your work where Generative AI was used.
- Include a reference link to the AI tool that was used.
- Include the prompt that was entered to generate the output.
- Explain how you modified the original output before submission.

Use of Generative AI tools for other purposes and use of Generative AI tools without proper acknowledgement is a breach of academic integrity.

Submission of deliverables to Moodle

All assessed work must be uploaded to Moodle using the provided submission link. Where practicable, submissions will be scanned using a similarity checking tool, such as TurnItIn.

Submission of assessable work using other methods (email, Google Drive, etc.) will not be accepted unless specifically instructions to do so are provided in the assignment brief.

Links to view deliverables online are only acceptable if instructions in the brief specifically ask you to provide a link.

Late Submissions

Each day, or part thereof, that an assessment task is overdue, a penalty of 5% of the available total marks applies. Assessment tasks submitted more than seven days after the due date will receive a mark of zero and may not receive feedback.

Special consideration requests must be submitted using the [online extension request form](#). Submitting an application for an extension or special consideration does not guarantee that the extension will be approved, so must inform your group members and continue to work on your assessment for submission as soon as you are able to.
